Tablet support, cargo compartment protection and collective protection with storage box

Tablet support is designed to offer stable positioning of tablets and screens for cabin crew. The Aeronautical grade Aluminum, the quality of the production and the state of the art design ensure strength and absence of vibration, together with adjustability and no interference with other systems and controls in the cabin. This support has been developed together with the pilots and for the pilots. The kit is studied to be cost effective for every operator. The kit is certified under EASA rules as Minor Change.

CPSB (collective protection and storage box) protects the collective from influences of the fond-passengers and provides useful storage space between the front-seats.

CPP (cargo compartment protection) protects cargo compartment from damage.
