

Pilots see clearly with Swiss Rotor Solutions

STAND L70

Swiss Rotor Solutions is displaying its Maximum Pilot View Kit at Helitech International 2015.

The solution assists pilots with visibility during demanding operations such as sling load, law enforcement and military tasks.

The Maximum Pilot View Kit adds a new bubble door to the aircraft which provides more space for the pilot's head and an uninterrupted view through a large, single-piece window.

The kit enlarges the cabin floor window to 350% of the size of the existing component.

The solution can fit any AS350 aircraft and improves visibility by a factor of ten, according to Swiss

Rotor Solutions. The kit comprises two main pieces, with the new door is accompanied by a lower vertical window. The solution enables the pilots to view the drop zone in front and the cargo to the centre and the rear.

The company also says that its solution provides improved operational safety and efficiency as well as contributing to reducing pilot fatigue.
